

## Comprehensive Database Searching – Multiple Databases

<https://www.alverno.edu/media/alvernocollege/library/pdfs/multidatabase.pdf>

1. Use any **EBSCOhost database** to build multiple databases into a literature search.
2. To access an EBSCOhost database, visit the [Alverno Library](#) homepage, select Databases A-Z and choose any EBSCO database. Start with Academic Search Premier if you aren't sure which database to choose.
3. Click the “Choose Databases” link, this allows you to add multiple EBSCOhost databases to a search.

4. A window will appear listing the EBSCOhost databases available to Alverno patrons. Select the databases that you wish to include in a search.

5. After you've selected your databases, click “OK”. Enter your search terms and click “Search” to view your results.

6. **Please note**, the “Advanced Search” limits may not work properly when multiple databases are added to a search.
